

West Suffolk Annual Report 2020-2021

Introduction

The West Suffolk Council Annual Report 2020 to 2021 covers the period from 1 April 2020 to 31 March 2021. The report highlights the progress and achievements of West Suffolk Council over the past year in achieving our vision and priorities. Much of this work has been severely affected by COVID-19 and so the report sets out how we have continued to support local businesses and communities to respond to and recover from the impacts of the pandemic.

During 2020 to 2021 Suffolk's Public Sector, including West Suffolk Council, worked together to agree a strategic approach for how Suffolk will recover from the coronavirus pandemic. Suffolk Public Sector Leaders' priorities are physical and mental health, town centres, housing and homelessness, young people and climate and environment. The proposals will work alongside individual organisations plans to support recovery among Suffolk residents and businesses.

This report presents our key accomplishments in a series of infographics that are categorised under the three priorities that we set out in our [Strategic Framework 2020 to 2024](#).

These priorities are focused on growing West Suffolk's economy, fostering resilience in families and communities that are healthy and active and ensuring there is increased and improved provision of appropriate housing in both towns and rural areas. Attached as Appendix 1 are highlights from our Environmental Statement 2020 to 2021.

More than ever before, we have worked with a wide range of partner organisations and agencies from across Suffolk to support local residents and businesses to achieve our priorities.

Growth in West Suffolk's economy for the benefit of all our residents and UK plc

Last year, £70million was distributed to 2,397 local businesses across all the COVID-19 business grant schemes. A proactive and rapid response to supporting businesses was taken including administering grants through automatic payments.

Supported and responded to 800 enquiries, provided businesses with advice on how to switch to takeaway and delivery services, carried out spot checks of hospitality businesses to ensure adherence with COVID-19 restrictions, and supported businesses with advice on closing and reopening and how to deal with outbreaks.

£205,000 secured from the Suffolk Inclusive Growth Investment Fund to aid recovery and bring new prosperity to West Suffolk's town centres.

New skills initiatives delivered with our partners supporting school pupils with their career aspirations, encouraged businesses to employ apprentices while also becoming partners in 'Kickstart' – which will boost opportunities for young people in the workplace.

The new Epicentre building opened and welcomed new businesses at the Haverhill Research Park, offering offices, meeting rooms and laboratory space.

West Suffolk Manufacturing Group continued to attract a wide range of manufacturers from across the area to share experience, knowledge and networking opportunities while moving to online meetings.

2020 to 2021 saw the final stages of the Mildenhall Hub's construction. The hub will deliver a better school, improved leisure facilities and integrated community and public services for the benefit of people living in and around the town.

Critical services of household waste and recycling collection services maintained throughout the year despite reduced staffing due to shielding and an increase in household waste.

Over this year the ONE Haverhill Partnership has been progressing plans to develop a Haverhill Hub which will incorporate health and other partners to provide services to the community.

Strategic approach to working towards net carbon zero by 2030 agreed.

1,690 planning applications granted.

£2,750,000 secured from the Government's Getting Building Fund for the redevelopment of the former post office site (17-18 Cornhill) in Bury St Edmunds, a project also with investment from the council. Work began in this year on the redevelopment which will provide improved access and integration of the Arc, Cornhill and Buttermarket.

£1,430,000 secured from the Government's Public Sector Decarbonisation Scheme to help deliver a range of energy efficiency, decarbonisation and battery energy storage projects in our climate emergency action plan.

We support the Love Newmarket Business Improvement District (BID, voted for a further five year term by Newmarket businesses. The BID supports local businesses, works to improve the vitality of the town and will raise over £1.5 million through an annual levy. Over this year the ONE Haverhill Partnership has been progressing plans to develop a Haverhill Hub which will incorporate health and other partners to provide services to the community.

25 market traders were supported to set up online delivery services and promote their businesses online so they could continue to trade through the pandemic, the number of stallholders across Brandon and Haverhill markets was increased and town centre events were organised in Bury St Edmunds, Brandon and Haverhill.

Resilient families and communities that are healthy and active

More than 2,035 calls handled on the Home But Not Alone telephone line, which arranged for 120 emergency food parcels to be delivered while working with 200 community groups to support vulnerable households. 4,600 welfare calls made to those who were identified as clinically extremely vulnerable.

LifeLink, which connects people to local social activities and services to improve wellbeing, supported 2,120 participants with 2,500 actions plans, 7,751 appointments and points of contact and 2,212 hours of dedicated one-to-one time with LifeLink coordinators.

£466,733 of Community Chest funding supported 35 projects across 31 organisations. 62 organisations were supported with online capacity training courses to outline funding opportunities for voluntary organisations, community groups and social enterprises. More than £207,000 of support was distributed through locality budgets.

2,500 calls from businesses requiring support and advice to trade in a COVID-19 safe manner were handled by Environmental Health. More than 4,000 businesses, including hospitality trade, licensed premises and private hire and hackney carriage licensees were proactively contacted when guidance changed and 500 visits to businesses were undertaken to check COVID-safe measures.

£425,000 funding secured from a Department for Business, Energy and Industrial Strategy grant which will deliver a park home insulation scheme across three parks. This is part of a £1.2 million bid of which West Suffolk Council was the lead authority.

660 litter picking kits delivered to volunteers in West Suffolk, representing an increase of 270 on the previous year.

Refurbishment of the Newmarket Leisure Centre completed in June 2020, which saw a larger gym, eGym, café and soft play area installed.

First phase of the update to Brandon Leisure Centre completed in March 2021 with a new gym, changing rooms and the installation of Brandon's first Changing Places toilet.

County lines awareness training sessions held throughout the year, engaging with 67 individuals over six online sessions.

A new skate park completed in Newmarket, featuring a free-flowing all-in-one space with lighting and security cameras installed for additional safety. The project was supported by Orbit Housing, Anglian Water, Godolphin, Newmarket Town Council, locality budget and the council, with Newmarket Academy students fundraising for the project.

15,000 visitors enjoyed the Large Earth (Gaia) exhibition hosted at the Apex between 3 and 18 October 2020.

£500,000 funding granted by the Arts Council to help recover income lost from the Apex and West Stow Anglo Saxon Village having to close due to the pandemic. A new marquee purchased for West Stow has enabled more outdoor opportunities for crafts, events and activities.

Footfall at Nowton, Brandon and East Town Parks significantly higher than in the previous year.

3,500 responses to the West Suffolk Local Plan consultation that included an innovative online virtual exhibition hall as new ways of consulting were put in place due to the pandemic.

Increased and improved provision of appropriate housing in West Suffolk in both our towns and rural areas

64 empty homes brought back into use.

901 new houses delivered, exceeding our target of 814.

2,044 households supported to improve the quality of their rented homes, exceeding the target of 1,283.

The Great Barton Neighbourhood Development Plan first phase consultation received more than 3,000 comments, with 99 per cent being submitted digitally.

New Independent Living Suffolk service introduced to complete grant-funded works in the homes of disabled and vulnerable residents, including urgent adaptations. This contributes to our equality objective of ensuring that 'housing meets the needs of particular groups and enables them to remain independent'.

Delivered 35 per cent affordable housing (against our target of 30 per cent on developments of 10 homes or more).

Development started of the second Barley Homes residential site in Haverhill.

1,884 households at risk of homelessness provided with advice and support.

196 individuals accommodated through the Government's Everyone In initiative since the first lockdown.

Successfully bid for more than £800,000 of Next Steps Accommodation Programme funding to deliver three units of temporary accommodation and 11 places for people with additional support needs.

Innovative new personalised healthcare service launched with the West Suffolk Clinical Commissioning Group, Marginalised and Vulnerable Adults Service and Sanctuary Housing for rough sleepers in supported accommodation.

Rough sleeper numbers dropped from 13 to four in one year.

West Suffolk Council Environmental Statement 2020 to 2021

The pandemic has affected the council as it has other organisations globally. The restrictions put in place meant that our offices had minimal occupancy. However, many services still required vehicles or staff working in our communities. These changes to operation and occupancy are reflected in the marked decrease in environmental impacts set out in the 2020 to 2021 environmental statement.

The environmental statement shows reductions in waste, energy consumption and business travel, all of which are dependent on people using our buildings. Fuel consumed for refuse collection and other services requiring vehicle movements showed a slight reduction.

Council officers and members of Cabinet have been part of a Suffolk wide approach to tackle climate change and have also supported local businesses, voluntary groups and organisations in their climate change efforts.

Moving forward, the council will continue to learn from the effects of the pandemic and look for further opportunities. We hope to continue to improve our performance and lock in the benefits of some of the lessons learned.

Environment and biodiversity target and action plan adopted.

West Suffolk Council emissions down 18.8 per cent, Abbeycroft Leisure emissions down 42.8 per cent, total emissions down 28.6 per cent compared to 2019 to 2020, total emissions down 50.2 per cent compared to 2010 baseline.

Renewable energy generated increased by 11 per cent compared to 2019 to 2020, representing an increase of 86 per cent compared to 2012.

Total owned vehicle emissions down 17 per cent compared to the 2010 to 2011 baseline and total fuel use down 11 per cent compared to 2019 to 2020.

West Suffolk Council business travel down 67 per cent compared to 2019 to 2020, West Suffolk Council business travel down 78 per cent compared to 2010 baseline.

West Suffolk Council water use down 28 per cent, Abbeycroft Leisure water use down 66 per cent, total water use down 52 per cent compared to 2019 to 2020, total water use down 58 per cent compared to baseline.

Total office waste down 52 per cent. The recycling rate is 75.5 per cent, which is up 39 per cent compared to 2019 to 2020.

Six parks maintained Green Flag status.

Public electric vehicle chargers installed by West Suffolk Council can support 41 electric vehicles charging at the same time.

West Suffolk Council electric vehicle charge points provided enough electrical energy for vehicles to travel 120,758 miles.

1,500 trees planted across the district.

Further information

If you would like to know more about the achievements described in this annual report, or any of the other work and activities of the council, please contact the relevant [Cabinet member](#).

Cabinet members are often known as 'portfolio holders'. This is because each Cabinet member has a range of responsibilities, which together make up a portfolio. The areas of responsibility for each Cabinet member are included in the link provided.

- 

1. Introduction

This report is a summary of the outcome of the activities West Suffolk Council (WSC) undertook to manage and reduce its environmental impact during the year ending 31 March 2021.

After the declaration of an Environment and Biodiversity Emergency in West Suffolk in September 2019, West Suffolk Council launched an Environment and Climate Change Task Force to evaluate current progress and develop new avenues to help reduce greenhouse gas emissions in line with current aspirations. The Task Force's recommendations were confirmed by cabinet and West Suffolk Council agreed a Net Zero Emissions by 2030 target with carbon budgeting periods agreed to measure performance towards this target – see Table 1. The Environmental Management Group has taken the outcomes of the taskforce and developed an action plan to achieve them. The Environmental Management Group has cross Council membership with progress included in the annual report.

The council reports emissions using Carbon Dioxide equivalent (CO₂e) which is a unit of measurement used to indicate the global warming potential of a greenhouse gas, expressed in terms of the global warming potential of one unit of Carbon Dioxide. It is used to evaluate the releasing (or avoiding releasing) of different greenhouse gases against a common basis.

Table 1 shows the carbon budget periods set out in West Suffolk Council's Environment and Climate Emergency Declaration

Budget period	Period	Annual emissions at end of period	Emissions budget for the period
First	April 2020 to March 2023	4,675 tCO ₂ e per year	18,700 tCO ₂ e
Second	April 2023 to March 2026	2,484 tCO ₂ e per year	8,292 tCO ₂ e
Third	April 2026 to March 2030	840 tCO ₂ e per year	2,520 tCO ₂ e
Fourth	2030-31	Net zero emissions	

There is a significant amount of work which contributes to improving the environment carried out by the council directly and with partners which is not covered in this statement. More information can be found on the council's webpage - [Protecting our environment](#).

While the council did play a vital role in tackling the pandemic, helping businesses, our communities and delivering services it continued a range of initiatives as part of its climate change and environmental work. Updates were included for members from the Leader of the Council throughout this time. While the pandemic had an impact on some targets and work it also saw some services being delivered in more environmentally friendly ways and communities championing greener ways of living.

Despite the pandemic the council has continued to make progress on many of its targets and is building on new and existing initiatives. The projects undertaken and progress made is outlined in Section 2 and within the main report.

The report is structured by theme with highlights set out below. For ease, each icon contains a hyperlink to the relevant section of the report.

Overview of environmental performance during 2020-21

50.2%

Reduction in total emissions compared to 2010 baseline

Total emissions down 28.6% compared to last year

86%

Increase in renewable energy generated compared to 2012

Renewable energy generated up by 11% compared to last year

11%

Reduction in total council fuel use compared to last year

Total owned vehicle emissions have decreased by 17% compared to 2010-11 baseline

6

Green Flag status parks held during 2020-21 - regaining Green Flag status for West Stow park

58%

Reduction in total water consumption compared to baseline

52% Reduction in total water consumption compared to last year

75.5%

Recycling rate, which is up 39% compared to last year

52% Reduction in total office waste compared to last year

41

Electric vehicles can be charged at the same time using public chargers installed by WSC

1,500

plants and trees planted during 2020-21

78%

Less business travel compared to 2010 baseline

Business travel down 67% compared to last year

Greenhouse gas emissions arising from West Suffolk Council activities

Target: reduce greenhouse gas emissions from West Suffolk Council activity to net zero by 2030. Measured in Carbon Dioxide equivalent (CO₂e).

West Suffolk Council and Abbeycroft Leisure	
Baseline emissions 2010	8,215 tonnes CO ₂ e
Annual emissions in 2020-21	4,093 tonnes CO ₂ e

Carbon Dioxide equivalent (CO₂e) is a unit of measurement used to indicate the global warming potential of a greenhouse gas, expressed in terms of the global warming potential of one unit of Carbon Dioxide. It is used to evaluate the releasing (or avoiding releasing) of different greenhouse gases against a common basis.

We include emissions that arise from buildings and transportation. This includes the leisure centres operated by Abbeycroft Leisure (ACL) and other operational buildings such as The Apex, it also includes buildings that we purchase energy for but excludes buildings that we own and are leased to local businesses who pay their own energy bills. The figures do not include the staff commuting journeys to our sites.

The combined emissions from West Suffolk Council and ACL activity has continued to decrease, during 2020-21 emissions decreased by 28.6% to the previous year - see Figure 1 below. Of this total there has been a 18.8% decrease in emissions from council activity and a 42.2% decrease in emissions from Abbeycroft Leisure - see Figure 2 on the next page. While COVID-19 has had an impact these buildings in the main still had to be run and were used by various staff and agencies through this time.

Figure 1 Combined greenhouse gas emissions by year

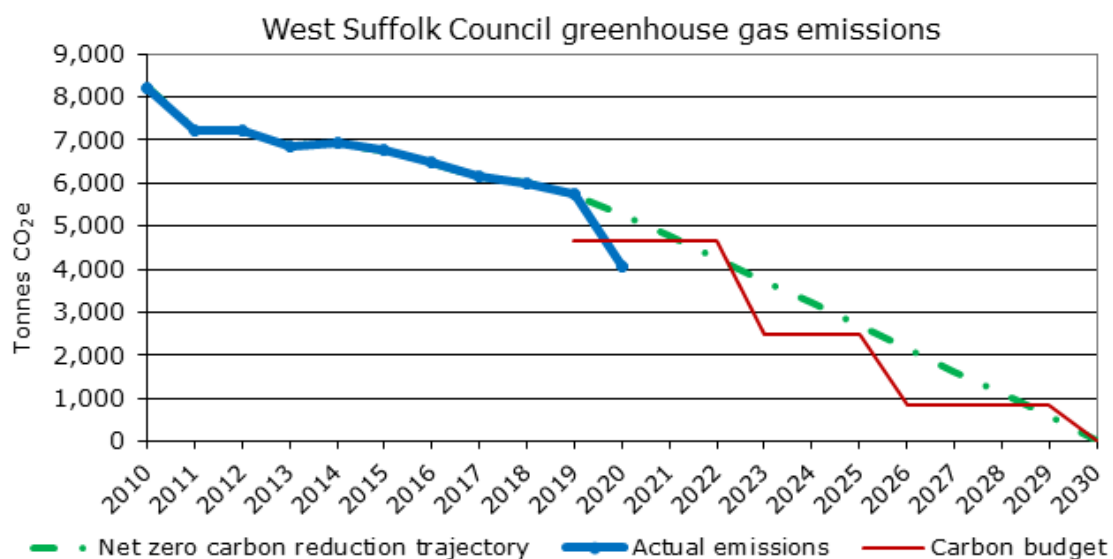

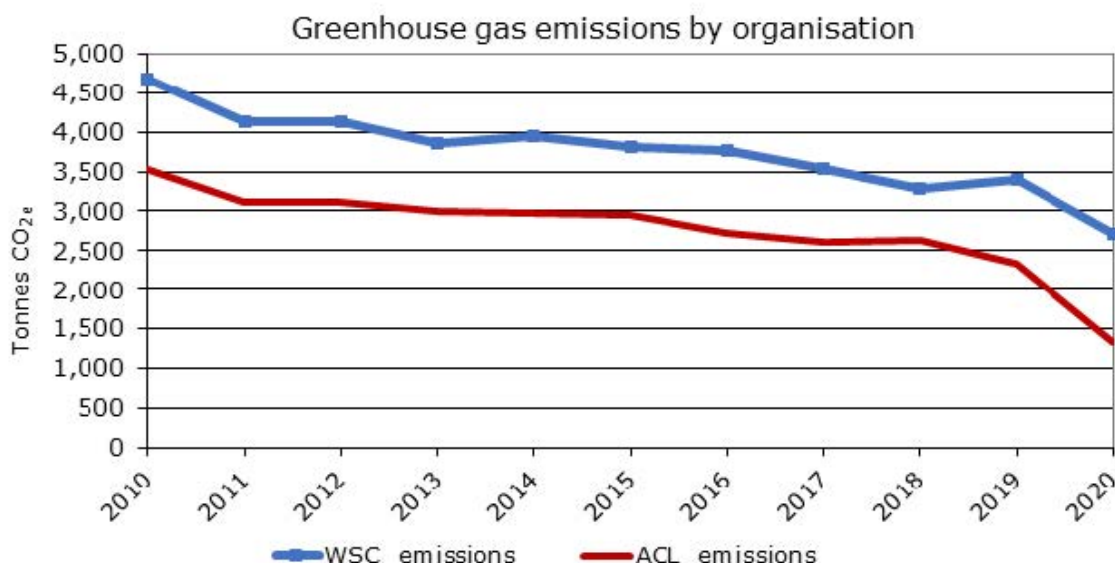

Figure 2 Greenhouse gas emissions by organisation over time

Impact of COVID-19 on environmental performance

The pandemic has affected the council as it has other organisations globally. The restrictions put in place mean that our offices had minimal occupancy, however, many services have still required vehicles or staff working in our communities. These changes to operation and occupancy are reflected in the marked decrease in environmental impacts set out in the 2020-21 environmental statement.

The environmental statement shows reductions in waste, energy consumption and business travel. All of which are dependent on people using our buildings. Fuel consumed for refuse collection and other services requiring vehicle movements have shown a slight reduction.

The council recognises the potential for a shift in emissions caused by working at home however, calculating the exact impact of this is complex and depends on variables such as building age, type, and number of occupants, none of which the council holds data for. Should home working be significant during 2021-22 the council will develop a representation of the potential impact since lockdown began.

Moving forward, the council will continue to learn from the effects of the pandemic and look for further opportunities. We hope to continue to improve our performance and lock in the benefits of some of the lessons learned.

Notes

The gradual decarbonisation of grid electricity is a key component of the UK emissions reduction targets. Emissions arising from grid supplied electricity dropped by 9% in 2020 compared to 2019 data. Appendix 1 contains information on emissions reporting scopes.

2. Building energy use

Target: to meet the net zero emissions target we will reduce energy consumption from buildings operated in 2019-20 by 50% by 2025.

West Suffolk Council and Abbeycroft Leisure	
Emissions in 2010	5,436 tonnes CO ₂ e
Emissions in 2020-21	2,298 tonnes CO ₂ e

Emissions arising from all gas, electricity, and biomass consumption are included in this section. Biomass is a fuel stock comprised of wood chips. Combined emissions from WSC and ACL buildings have continued to decrease following previous years. In comparison to 2019-20, total emissions from buildings are down by 35.6% and down by 58% compared to 2010. Figure 3 shows the decrease in emissions over time.

The decrease in emissions is a result of a reduction in total gas emissions of 35.2%, a reduction in electricity emissions of 35.7% and an end to oil consumption at West Stow park. There was a small increase in emissions from biomass consumption of 0.36 tCO₂e. There was an increase in WSC gas consumption of 3% due to increased ventilation requirements for occupancy during the COVID-19 pandemic.

Since October 2020 the council has purchased 100% renewable energy generated from solar, wind and hydro sources - more information on the fuel mix can be found at - [Ecotricity - Our fuel mix](#). Under dual emissions reporting the council's switch to purchasing renewable energy saved 689.5 tCO₂e however, we report emissions from electricity consumption using location-based grid average emission factors as per Streamlined Energy and Carbon Reporting legislation.

Figure 3 Emissions from building utility consumption over time

Some notable property projects this year which have contributed to the above changes include:

- energy efficiency LED lighting installed through the first-floor offices at West Suffolk House
- electric vehicle rapid charger James Carter Road Mildenhall.

3. Renewable energy

Target: Increase the amount of renewable energy generated each year.

Renewable energy generated (kWh - kilowatt an hour)	
Baseline generation in 2012-13	300,220kWh
Generation in 2020-21	559,058kWh

The council has installed solar photovoltaic (PV) systems to reduce its electricity costs and carbon emissions. The energy generated by all systems installed on council offices, depots and leisure centres is totalled in this section.

The total capacity of the PV systems installed on West Suffolk Council property and leisure centres stands at 807kWp and they generated 559,058kWh of electricity during 2020-21 which is enough to power 157 average sized homes for the year – more than previous years.

Figure 4 below shows the amount of electricity generated by year which is generally increasing over time.

Figure 4 Annual renewable electricity generation on council properties

Toggam solar farm

2020-21 was another good year for electricity generation at the solar farm. Toggam Solar Farm generated 11,788MWh (megawatt an hour) of electricity compared to a target of 11,507MWh. This was lower than the previous year due to broken transformer impacting 20% of the site during August and September. The electricity that is sold into the National Grid is enough to power around 3,300 homes and offset the carbon dioxide emissions from 1,500 cars. The value of the electricity generated from the site was worth £1.3 million for the year. Figure 5 below shows the target electricity generation along with actual generation for Toggam Solar Farm.

Figure 5 Chart showing electricity generation during 2020-21

Renewable heat

The council continues to identify ways to reduce greenhouse gas emissions by switching to renewable heat technologies. It has previously installed ground source heat pumps in West Suffolk House and The Apex in Bury St Edmunds and a biomass wood chip boiler at The National Horse Racing Museum fuelled by wood chip produced locally and supplied by the Jockey Club Estates.

In 2020-21 the council installed a ground source heat pump to replace the oil boiler at West Stow and supported the Bardwell Playing Fields Association with the installation of an air source heat pump at their new pavilion.

4. Fuel use

Target: Reduce the emissions from total fuel consumption from the baseline year in 2010.

Fuel use	
Consumption in 2019-20	773,431 litres
Consumption in 2020-21	686,136 litres

This section includes the total litres of fuel used in, but not limited to, refuse collection vehicles, road sweepers, grounds maintenance vehicles, petrol or diesel bought using fuel cards, and industrial mobile machinery. In 2019-20 the council have updated the process for reporting on fuel use and will be reporting on total fuel consumption rather than fleet consumption to ensure an accurate emissions figure.

Total owned vehicle emissions have decreased by 17% compared to 2010-21 baseline.

Total fuel use has decreased by 11% compared to 2019-20.

The council’s electric van has travelled 2,075mi since it was purchased last year producing zero point of use emissions. Feedback from those driving the electric van has been positive and the council is looking to switch other fleet vehicles to zero emission alternatives as part of its fleet renewal programme. It is anticipated that the next vehicles to be swapped to electric alternatives will be supervisor vans and our fleet management team will be trialling further electric vehicles as COVID-19 restrictions end. Where possible the operations team are investing in electric and rechargeable tools rather than fossil fuel driven ones.

Figure 6 Chart showing owned vehicle emissions by year

5. Business travel

Target: Reduce the amount of grey fleet miles from the baseline year in 2010.

Grey fleet includes vehicles that are owned and used by council employees.

Distance travelled	
Baseline 2010	673,285 miles
Distance travelled in 2020-21	146,924 miles

Business travel includes staff and councillor journeys, pool car use and other owned or leased vehicles. Business passenger miles have decreased by 67% compared to 2019-20 as shown in Figure 7 below.

Of the total distance travelled, private car use (grey fleet) decreased by 65% and pool car use fell by 92% from 33,466mi to 2,822mi.

Our pool car service is now provided by a third party however, we will account for the emissions resulting from pool car usage as they are a direct result of staff activity.

The introduction of COVID-19 lockdown measures has changed the way we deliver our services and switching to online meetings have contributed significantly to reduced business travel.

Figure 7 Chart showing business passenger miles travelled

6. Water consumption

Target: Reduce the amount of water used in council activities from the baseline year in 2010.

Water consumption (m ³)	
West Suffolk Council baseline consumption in 2010	23,827
West Suffolk Council consumption in 2020-21	17,778
Abbeycroft Leisure baseline consumption in 2010	51,076
Abbeycroft Leisure Consumption in 2020-21	13,850
Total baseline consumption in 2010	74,903
Total consumption in 2020-21	31,628

This section includes the total of water consumption from all WSC owned and operated properties as well as those run by ACL.

Total water consumption has decreased by 58% compared to the 2010 baseline and 52% compared to 2019-20. This is comprised of a decrease in water consumption by both West Suffolk Council and ACL by 28% and 66% respectively. Figure 8 shows the change in total water consumption over time and by organisation.

The reduction on ACL water consumption is linked to changes in occupancy as a response to the COVID-19 pandemic.

Figure 8 Chart showing total water consumption by year

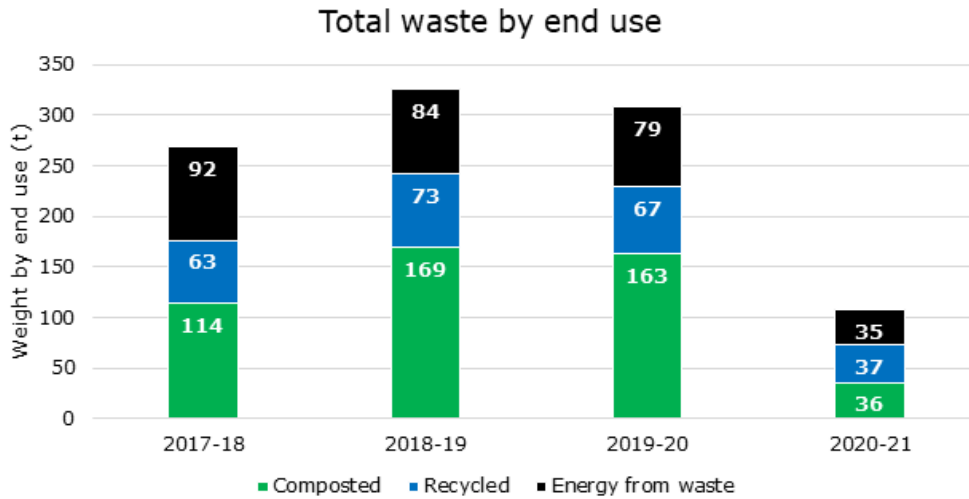

7. Corporate waste

Target: To increase the office waste recycling rate and decrease the total waste arising from council operations from the baseline year 2018.

Figure 9 below shows the weight of key waste streams generated from WSC activity and their disposal method. Compared to 2019-20 there has been a 65% decrease in total waste generated.

Figure 9 Chart showing waste by end use and total waste arisings

Office waste

During 2020-21 the total amount of waste generated was 42.56 tonnes, of this residual waste accounted for 10.44 tonnes and recycling was 32.12 tonnes.

The proportion of waste that is recycled has increased for the third consecutive year to 75.47%. This represents an increase in the recycling rate of 39% compared to 2019-20.

When staff are working in our offices for more of the time, we will schedule another waste audit of one of our buildings to continue to improve pro-recycling communications.

Figure 10 below shows the proportion of waste recycled compared to that sent to Energy from Waste (EfW) centre each year. EfW aims to move waste up the waste hierarchy unlocking useful electricity from waste which would otherwise have gone to landfill. More information on the Suffolk EfW facility can be found at - [Suffolk EfW](#).

Figure 10 Chart showing annual office waste and recycling weights

8. Biodiversity and parks

Target: to maintain or increase the number of green flag accredited sites compared to the baseline year 2016.

Green flag status

The following sites successfully gained Green Flag accreditation during 2020-21:

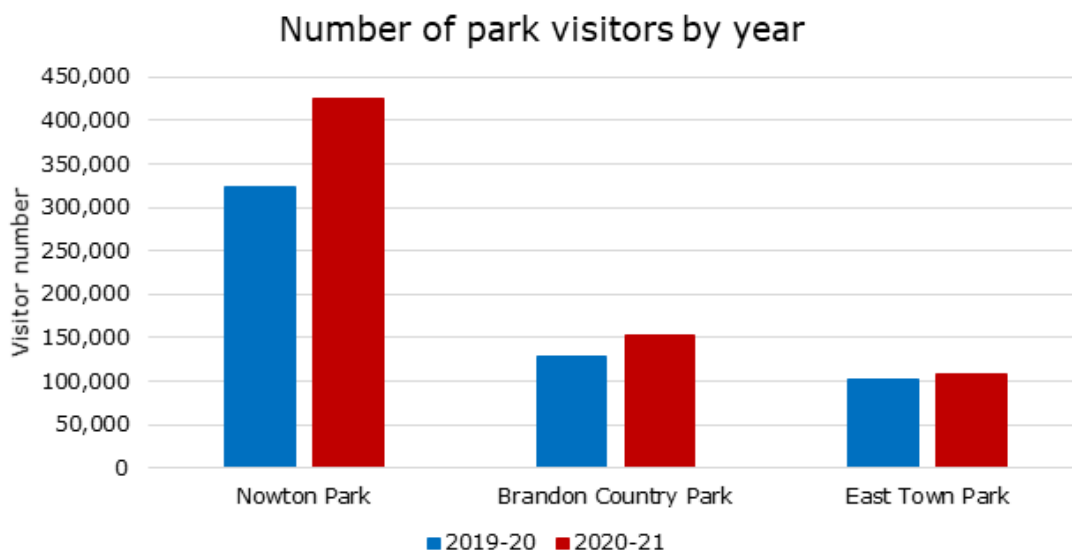

1. Abbey Gardens, Bury St Edmunds (retained)
2. Nowton Park, Bury St Edmunds (retained)
3. East Town Park, Haverhill (retained)
4. Aspal Close, Mildenhall (retained)
5. Brandon Country Park, Brandon (retained)
6. West Stow Country Park (new)

During 2020-21 we regained the Green Flag status for West Stow Country Park. The park supports a total of 806 priority UK Biodiversity Action Plan species including birds, amphibians and reptiles, plants, fungi, bats, and moths. In 2021-22 we hope to retain the green flag status for all six sites. More information on Green Flag Awards can be found at [Green Flag Award](#).

Use of parks and other public open spaces during the COVID-19 pandemic

This past year has seen a rise in footfall of visitors to our parks and open spaces, with the greatest increase at Nowton Park at 31% compared to 2019-20. Figure 11 shows visitor footfall occurring from April to March between 2019-20 and 2020-21.

Figure 11 Chart showing number of park visitors compared to 2019-20

With the increase in footfall has come the challenge of protecting key areas of significance for nature conservation. To help better inform visitors of key areas of interest we have been reviewing site signage, promoting anti littering and dog fouling campaigns on our site Facebook pages.

Ongoing biodiversity and natural environment programmes

GIS mapping (Geographic Information System)

We are digitally mapping the various green space features within West Suffolk. Areas higher in biodiversity are being identified on the council's GIS system and suitable maintenance regimes implemented to support these areas.

Example of mapping environments

-  Annual Bedding
-  Bark
-  Football Pitch
-  Grass Amenity
-  Grass Conservation
-  Grass Embankment
-  Grass Hay Cut
-  Graves on Grass
-  Green / Orange Grass TBC
-  Hard Surface
-  Hedge
-  Maintained by Residents
-  Mulch
-  No Set Regime
-  Play Surface
-  Pond
-  Rose Bed
-  Shrub Bed
-  Wildflower Mix
-  Woodland

Encouraging and protecting habitats

The Brandon Roadside Nature Reserve on the London Road Industrial Estate has now been designated a Site of Special Scientific Interest (SSSI) due to the success of the Field Wormwood Plant (*Artemisia campestris*) and the more important and rarer Wormwood Moonshiner Beetle.

The Saxongate Nature Reserve in Bury St Edmunds is being managed to support a variety of wildlife including Frogs and toads and the ponds at East Town Park are managed to support a variety of wildlife.

Landscape planting

The newly established landscape planting at the Mildenhall Hub includes 2.5 hectares of meadow and habitat seed mixes (wildflower, floral lawn, wetland and hedgerow), 300 trees and 1,709 native shrubs.

Abbey Gardens

In July 2020 the extension of the Abbey Gardens into the former plant growing nursery known as Eastgate nursery was open to the public. The extension includes a new path which provides easier pedestrian access between Ram Meadow and No Mans Meadows. A new wildflower labyrinth was sown on the site of the former tennis court area in spring 2020.

Reduction of fossil fuel use in the Parks Service

Following the successful replacement of certain items of motorised equipment at Nowton Park last year the equipment used by the team of staff in the Abbey Gardens is also now being replaced. As well as being more environmentally friendly the new equipment is quieter.

9. Environmental compliance

Target: No incidents leading to formal action being taken by regulatory bodies.

Target date: Ongoing

The council currently maintains environmental permits for two operational sites located in Bury St Edmunds and Haverhill, which are used to support the strategic management of West Suffolk’s municipal waste. There have been no compliance issues, breaches of the permit conditions or action taken by a regulatory body. In 2020, the council also successfully surrendered the Environmental Permit for the former depot site in Bury St Edmunds.

Moving forward, we are working with strategic partners to maintain compliance while ensuring that waste collected is managed in a safe, efficient and effective way.

Appendix 1

Emissions scopes

Figure 12 shows the total greenhouse gas emissions by reporting scope. The greatest proportion of emissions originate from Scope 1, referred to as direct emissions; this includes emissions from the consumption of gas and owned transport. Table 3 details where each source of emissions sits within the reporting framework.

Figure 12 Total emissions by reporting scope

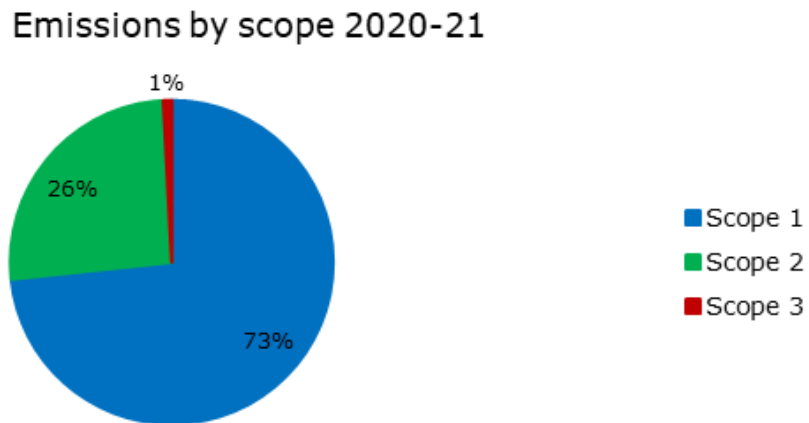

Table 3 Sources of emissions by scope

Emissions scopes	
<p>Scope 1 – direct emissions</p> <p>Emissions from the activities of an organisation or under their control.</p>	<p>WSC biomass WSC gas consumption WSC heating oil WSC owned transport ACL biomass ACL gas consumption</p>
<p>Scope 2 – indirect emissions</p> <p>Emissions from electricity or other energy purchased and used by the organisation. These emissions are created during the production of the energy by another before they are used by the organisation.</p>	<p>WSC purchased electricity ACL purchased electricity</p>
<p>Scope 3 – all other indirect emissions</p> <p>All other indirect emissions from activities of the organisation, occurring from sources that they do not own or control. The council currently only reports key Scope 3 emissions sources.</p>	<p>WSC public transport WSC water consumption ACL water consumption Pool cars Staff and councillor mileage</p>
